

Security Assurance Response Pack

Customer-specific due-diligence response template

Document status

This pack records product controls, operational safeguards, evidence references and customer-specific actions. It is not a certification or an unconditional service guarantee.

1. RESPONSE DETAILS

Customer organisation

Proposed deployment scope

SecureObs response owner

Response date / version

2. EXECUTIVE ASSURANCE SUMMARY

Implemented product controls

Individual NFC or staff-code sign-in with PIN; scoped organisation, site, ward and role permissions; expiring sessions; failed-attempt lockout; cryptographically hashed staff PINs; HTTPS communication; time-stamped records; visible offline queueing for supported workflows; and Android application backup disabled.

Verified resilience arrangement

The production PostgreSQL service is configured for a full backup every 24 hours, retained for six days, together with continuous write-based point-in-time recovery. Restore testing and documented continuity procedures remain essential operational evidence.

Customer-specific qualifications or actions

Security Assurance Response Pack

Hosting, data protection and privacy

3. HOSTING AND TECHNICAL ARCHITECTURE

Hosting provider, region and production environment

Confirm before issue

Architecture, tenancy and network-boundary response

4. DATA PROTECTION

Current controls

Production communication uses HTTPS. Staff PINs are stored as salted PBKDF2-SHA256 hashes rather than readable values. Patient and room verification tags use random SecureObs tokens and do not write patient names, dates of birth or hospital numbers into the tag payload.

Encryption at rest, key management and evidence reference

Confirm platform configuration

Retention, deletion, data subject rights and DPA response

Security Assurance Response Pack

Identity, access, audit and device safeguards

5. IDENTITY AND ACCESS

Current controls

Access is restricted by organisation, site, ward, role, enabled module and active account. Temporary staff access can have defined start and expiry times. NFC identifies a staff record but does not bypass PIN, role, assignment, session or account-status controls.

Role and permission matrix / customer-specific configuration

6. ACCOUNTABILITY AND SESSION CONTROL

Current controls

Important actions record staff identity, time, organisation and relevant record context. Sessions expire and tablet inactivity lock is configurable. Temporary sessions end when their allocation expires.

Audit retention, review process and evidence reference

7. CUSTOMER DEVICE RESPONSIBILITIES

Agreed MDM, passcode, update, loss and disposal controls

Security Assurance Response Pack

Backup, outage response and incident management

8. BACKUP AND RECOVERY

Verified configuration

Full PostgreSQL backup every 24 hours; each full backup retained for six days; continuous write-based point-in-time recovery. This database recovery arrangement is separate from the tablet's offline queue.

Most recent restore test, result and evidence reference

Complete before customer issue

Contracted or proposed recovery objectives and responsibilities

9. OFFLINE CONTINUITY

Current behaviour

Supported records that cannot reach the service are held in a visible local queue. Staff can see pending items and human-readable failure details. An authorised user must re-authenticate before upload when required, and upload is only complete after successful synchronisation.

Customer continuity procedure and longer-outage arrangements

10. INCIDENT NOTIFICATION

Detection, escalation, notification timescale and named contacts

Agree contractually

Security Assurance Response Pack

Supplier assurance, evidence and approval

11. SUBPROCESSORS AND SUPPLIER MANAGEMENT

Current subprocessors, purpose, location and assurance reference

Verify current production list

12. VULNERABILITIES AND INDEPENDENT TESTING

Patch, dependency review, disclosure and remediation process

Independent testing, certifications and report availability

Do not claim unless evidenced

13. EVIDENCE AND ACTIONS

Evidence supplied or available under confidentiality

Open actions, owner and due date

APPROVAL

Prepared by / reviewed by / date / version
